PROFESSIONAL SUMMARY

Senior Frontend Engineer with 4+ years of experience architecting scalable, performant web applications using React, Vue 3, and TypeScript. Delivered multi-tenant enterprise ERP systems, SaaS platforms, and AI-powered products. Strong focus on component architecture, Core Web Vitals, design systems, TypeScript best practices, unit testing, CI/CD integration, and cross-functional collaboration.

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer

Numo Training

Apr 2025 – Present | Part-time

- Architected Vue 3 + TypeScript SPA from scratch — scalable routing, lazy-loaded modules, and reusable component patterns for an enterprise multi-tenant ERP platform.
- Enforced strict TypeScript (generics, utility types, discriminated unions) eliminating a full class of runtime data-shape bugs.
- Built a 30+ component design system (Tailwind CSS 4 + shadcn + Reka UI) with full RTL/LTR support across 10+ modules.
- Owned end-to-end feature delivery: API contract definition with Laravel backend → component build → production deployment.
- Implemented TanStack Query stale-while-revalidate caching — reducing redundant API calls by ~50%.

Mid-level Frontend Engineer

Santeon Inc.

Feb 2024 – Present | Full-time

- Architected and owned frontend for 3+ enterprise React products — establishing component patterns, state management strategy, and module boundaries.
- Optimized Core Web Vitals via code splitting, lazy loading, and asset optimization — achieving sub-2s LCP and 90+ Lighthouse scores.
- Enforced strict TypeScript (noImplicitAny) catching data-contract mismatches at compile time before reaching production.
- Containerized build pipelines with Docker and integrated CI/CD workflow — reducing deployment time by 40%.
- Wrote Jest unit and integration tests maintaining 80%+ coverage on all critical business-logic modules.
- Applied security best practices: JWT refresh logic, role-based route guards, input sanitization, and CSP headers.

Frontend Developer

Ilerra

Feb 2023 – Jan 2024 | Full-time

- Translated high-fidelity Figma designs into responsive, accessible SPAs using React and Redux Toolkit.
- Defined API data contracts with the backend team — reducing integration rework across 4 product modules.
- Built reusable component library adopted across multiple teams, improving development velocity.

Frontend Developer Intern

Motajer

Aug 2022 – Dec 2022 | Internship

- Built custom e-commerce themes with Redux Toolkit state management, cart functionality, and responsive layouts.
- Translated design mockups into production-ready interactive web pages with cross-browser compatibility.

KEY PROJECTS

Numo ERP – Multi-Tenant Enterprise Resource Planning + SaaS Platform

Stack: Vue 3, TypeScript, Inertia.js, TanStack Query, TanStack Table, Tailwind CSS 4, shadcn, Reka UI, Ziggy

- Architected a multi-tenant SPA supporting isolated tenant workspaces — each with independent data scope, role permissions, and branded configuration.
- Built a Platform module allowing super-admins to manage tenants, configure subscriptions, monitor usage, and control feature access across the entire system.
- Developed an Admin Hierarchy module supporting multi-level organizational structures — departments, teams, and reporting lines with dynamic permission inheritance.
- Delivered a full CRM module for lead management: lead capture, pipeline tracking, assignment workflows, status updates, and conversion reporting.
- Implemented a comprehensive HR module covering employee records, attendance, leave requests, payroll summaries, and performance reviews.
- Optimized data-heavy tables using TanStack Table with server-side pagination, sorting, and filtering — handling 10,000+ records with no performance degradation.
- Built a 30+ component design system with full RTL/LTR Arabic/English i18n and accessibility compliance across all modules.

3D Model Editor – Browser-Based glTF Scene Editor

Stack: React, TypeScript, React Three Fiber, Three.js, Drei, Zustand

- Built a browser-based editor for modifying glTF/GLB 3D models — real-time transform controls (position, rotation, scale), material property editing, and texture swapping.
- Composed declarative 3D scenes using React Three Fiber and Drei with orbit controls, environment lighting, and shadow rendering.
- Managed editor state (selected node, transform mode, scene hierarchy) with Zustand — enabling undo/redo and multi-panel sync with zero prop drilling.
- Rendered a live scene hierarchy tree reflecting the glTF node graph — select, isolate, or toggle visibility of any mesh or group.

TMS – Admin Dashboard for eSIM Management

Stack: React, TypeScript, Bootstrap 5, RESTful APIs

- Developed a real-time admin dashboard for full eSIM lifecycle management — plan assignment, bundle configuration, balance recharging, and usage history tracking.
- Built modular React components with live API sync, optimistic UI updates, and error boundary handling for resilient UX.
- Implemented frontend role-based access control — restricting sensitive eSIM actions to authorized admin roles only.

Idea-consult – AI-Powered Market Intelligence Platform

Stack: JavaScript, Bootstrap 5, WordPress, PHP

<https://ideaconsult.biz/>

- Built a responsive platform enabling businesses to generate AI-driven market reports and tailored business plans with dynamic tool integration.
- Optimized Core Web Vitals — improving FCP and LCP through asset optimization, lazy loading, and critical CSS inlining.
- Implemented on-page SEO strategy (meta tags, structured data, sitemap) improving search engine visibility for target business keywords.

TECHNICAL SKILLS

Frameworks	React, Vue 3, Next.js, Inertia.js
Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
State Mgmt	Redux Toolkit, TanStack Query, Zustand, Vuex
Styling	Tailwind CSS 4, Sass, shadcn, Reka UI, MUI, Bootstrap 5
Testing	Jest, Vitest, React Testing Library
Tools	Git, Docker, Vite, CI/CD, NPM, Yarn
Other	Core Web Vitals, Component Architecture, a11y, RTL/i18n, REST APIs, Security (JWT, CSP, XSS)

EDUCATION & CERTIFICATIONS

Bachelor's Degree in Arts and Education — Al-Azhar University | 2022

CS50X Computer Science – Harvard University (2024) · Complete JavaScript + React + Next.js – Udemy, Jonas Schmedtmann · Advanced Frontend Development – EraaSoft (2021–2022)
